No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1984 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 58

NUMBER 1, JUNE 1, 1984

KEIICHI OHNO AND JUNKICHI SOHMA. Analysis of Magnetic-Field-Induced Distribution Using ESR Parallel-Edge Lines of a Slow Tumbling Spin Probe in a Rigid Liquid Crystal	1
DAVID T. PEGG AND M. ROBIN BENDALL. Coupled Polarization Transfer Spectra for Higher-Spin Nuclei	14
T. T. NAKASHIMA, R. E. D. MCCLUNG, AND BOBAN K. JOHN. Experimental and Theoretical Investigation of ^2D - ^{13}C DEPT Spectra on CD_n Systems	27
BISWANATH MAITI AND BRUCE R. MCGARVEY. Spin-Lattice Relaxation Time of ^{13}C in $[\text{Fe}(\text{phen})_2(\text{N}^{13}\text{CS})_2]$. Nonexponential Decay	37
BOBAN K. JOHN AND R. E. D. MCCLUNG. Computer Simulation of Multiple-Pulse and Two-Dimensional FT NMR Experiments	47
DAVID J. SIMINOVITCH, MARK RANCE, KENNETH R. JEFFREY, AND MICHAEL F. BROWN. The Quadrupolar Spectrum of a Spin $I = 1$ in a Lipid Bilayer in the Presence of Paramagnetic Ions	62
NICHOLAS V. REO, COLEEN S. EWY, BARRY A. SIEGFRIED, AND JOSEPH J. H. ACKERMAN. High-Field ^{13}C NMR Spectroscopy of Tissue <i>in Vivo</i> . A Double-Resonance Surface-Coil Probe	76
P. MARK HENRICHS, MILTON L. COFIELD, RALPH H. YOUNG, AND J. MICHAEL HEWITT. Nuclear Spin-Lattice Relaxation via Paramagnetic Centers in Solids. ^{13}C NMR of Diamonds	85
S. A. DZUBA, A. G. MARYASOV, K. M. SALIKHOV, AND YU. D. TSVETKOV. Superslow Rotations of Nitroxide Radicals Studied by Pulse EPR Spectroscopy	95
J. M. ESCANYÉ, D. CANET, AND J. ROBERT. Nuclear Magnetic Relaxation Studies of Water in Frozen Biological Tissues. Cross-Relaxation Effects between Protein and Bound Water Protons	118
V. RUTAR. Suppression of Long-Range Couplings in Heteronuclear Two-Dimensional J Spectroscopy. Effects of Nonuniform One-Bond Couplings	132
NOTES	
C. MILLOT, J. BRONDEAU, AND D. CANET. Determination of Mutual Coupling in ^1H NMR Spectra by Semiselective Excitation	143

B. BLÜMICH AND R. KAISER. Stochastic NMR on a Commercial Spectrometer	149
COMMUNICATIONS	
PETER STILBS. Low-Temperature Dynamic NMR Spectroscopy of <i>meso</i> -Tetraphenylporphine in Solution	152
GARETH A. MORRIS, GRAHAM L. NAYLER, A. J. SHAKA, JAMES KEELER, AND RAY FREEMAN. Real-Time <i>J</i> Scaling in Carbon-13 NMR. I. A Simple Technique for Multiplicity Determination	155
A. J. SHAKA, JAMES KEELER, RAY FREEMAN, GARETH A. MORRIS, AND GRAHAM L. NAYLER. Real-Time <i>J</i> Scaling in Carbon-13 NMR. II. An Analysis of Instrumental Imperfections	161
CHRISTOPHER C. HANSTOCK AND J. WILLIAM LOWN. Two-Dimensional Double-Quantum Spectroscopy for the Hydrogen NMR Assignment of Oligodeoxyribonucleotides	167
R. E. D. MCCLUNG, T. T. NAKASHIMA, AND BOBAN K. JOHN. A Further Illusion of Spin Decoupling	173

NUMBER 2, JUNE 15, 1984

HIROSHI HORI, MASAO IKEDA-SAITO, GEORGE H. REED, AND TAKASHI YONETANI. Analysis of Powder and Single-Crystal Electron Paramagnetic Resonance Spectra for Manganese(II) Protoporphyrin IX Myoglobin at Various Microwave Frequencies	177
J. R. PILBROW. Lineshapes in Frequency-Swept and Field-Swept EPR for Spin 1/2	186
STEVEN BRUMBY. Simulation of EPR Spectra Recorded Using Phase-Sensitive Detection at Any Harmonic of the Modulation Frequency	204
MELVIN B. COMISAROW. Why Carbon-13 FT NMR Spectra Cannot Be Phased	209
R. M. GOLDING, R. O. PASCUAL, AND I. C. HOARE. A Further Study of NMR Isoshielding Diagrams for <i>f</i> -Electron Systems	219
ALBERT LÖTZ AND JÜRGEN VOITLÄNDER. ¹⁴ N Nuclear Quadrupole Double-Resonance and the B-N Bond in Amine-Boranes and Amine-Trifluoroboranes	235
ROBERT L. WOOD, WOJCIECH FRONCISZ, AND JAMES S. HYDE. The Loop-Gap Resonator. II. Controlled Return Flux Three-Loop, Two-Gap Microwave Resonators for ENDOR and ESR Spectroscopy	243
B. M. FUNG, DAVID S. L. MUI, ISRAEL R. BONNELL, AND ERIC L. ENWALL. Evaluation of Broadband Decoupling Sequences Applied to Liquid Crystal Solutions	254

N. BENETIS, J. KOWALEWSKI, L. NORDENSKIÖLD, H. WENNERSTRÖM, AND P.-O. WESTLUND. Nuclear Spin Relaxation in Paramagnetic Systems ($S = 1$) in the Slow-Motion Regime for the Electron Spin. II. The Dipolar T_2 and the Role of Scalar Interaction	261
N. BENETIS, J. KOWALEWSKI, L. NORDENSKIÖLD, AND U. EDLUND. Nuclear Spin Relaxation in a Paramagnetic Nickel(II) Complex. An Experimental Test of New Theoretical Models	282
MANFRED HOLZ, ODILE LUCAS, AND CHRISTIAN MÜLLER. NMR in the Presence of an Electric Current. Simultaneous Measurements of Ionic Mobilities, Transference Numbers, and Self-Diffusion Coefficients Using an NMR Pulsed-Gradient Experiment	294

NOTES

V. RUTAR. Suppression of Homonuclear J Couplings in ^1H - ^{13}C Chemical-Shift Correlation Maps	306
V. GALASSO. Theoretical Study of the Conformational Dependence of Nitrogen and Phosphorus Magnetic-Shielding Tensors in Hydrazine and Diphosphine	311
A. F. MEHLKOPF, D. KORBEE, T. A. TIGGELMAN, AND RAY FREEMAN. Sources of t_1 Noise in Two-Dimensional NMR	315
J. F. HINTON AND D. BUSTER. Assignment and T_1 Study of the Single Observable ^{33}S NMR Signal of $\text{S}_2\text{O}_3^{-2}$	324
JOHN AVOLIO AND ROBERT ROTHCHILD. Optical Purity Determination and ^1H NMR Spectral Simplification with Lanthanide Shift Reagents. IV. Mephobarbital, 1-Methyl-5-ethyl-5-phenylbarbituric Acid ...	328

COMMUNICATIONS

C. D. BUCKLEY AND K. A. McLAUCHLAN. A Theorem in Radical Pair Mechanism Electron Spin Polarization (CIDEP)	334
CHERYL A. SPRING AND NANCY S. TRUE. Axial and Equatorial ^{19}F Spin Relaxation of Gaseous Sulfur Tetrafluoride	338
HELENA SANTOS, DAVID L. TURNER, AND ANTÓNIO V. XAVIER. Four Quartets. Application to Two-Dimensional NMR	344
STEPHEN WIMPERIS AND RAY FREEMAN. An Excitation Sequence Which Discriminates between Direct and Long-Range CH Coupling ...	348
WILLIAM M. WESTLER, GILBERTO ORTIZ-POLO, AND JOHN L. MARKLEY. Two-Dimensional ^1H - ^{13}C Chemical-Shift Correlated Spectroscopy of a Protein at Natural Abundance	354

J. SELIGER, V. ŽAGAR, AND R. BLINC. Oxygen-17 NQR Study of the Phase Transition in Squaric Acid	359
GEOFFREY BODENHAUSEN, HERBERT KOGLER, AND R. R. ERNST. Selection of Coherence-Transfer Pathways in NMR Pulse Experiments	370
M. GEOFFROY, A. LLINARES, AND E. KRZYWANSKA. ESR Study of Chalcogeno Triphenylarsoranyl Radicals Ph_3AsX^- Trapped in Single-Crystal Matrices	389

AUTHOR INDEX FOR VOLUME 58	533

The Subject Index for Volume 58 will appear in the December 1984 issue as part of a cumulative index for the year 1984.

Information for Authors

The *Journal of Magnetic Resonance* includes papers dealing with the theory, techniques, methods of spectral analysis and interpretation, spectral correlations, and results of magnetic resonance spectroscopy and related fields. The Editor seeks the assistance of expert referees in the evaluation of manuscripts of articles, but he alone is responsible for the final decision concerning acceptance.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in the *Journal of Magnetic Resonance* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

A signed photocopy of the copyright assignment form which appears following this "Information" should be submitted to the Editor along with each manuscript. (This form will not be binding if the manuscript is not accepted for publication in the *Journal of Magnetic Resonance*.)

Fifty reprints of each paper are supplied without charge, and additional reprints may be ordered on a form that is sent to the authors with the proofs that the authors receive. The journal *assesses no page or publication charges*.

All manuscripts and books for review should be sent to the Editor, **Wallace S. Brey, Department of Chemistry, University of Florida, Gainesville, Florida 32611.**

Form of the Manuscript

Manuscripts should be submitted in triplicate. The original typewritten copy should be supplied; mimeo or xerographic reproductions are usually not acceptable. All typing must be double-spaced, including references, footnotes, and figure captions, on one side of paper approximately 22 × 28 cm (8.5 × 11 in.). Each page of the manuscript should be numbered. If the paper is lengthy, it may be divided into sections, but the sections should not be numbered. The first line of each paragraph is indented.

Cover Page. The first page contains the article title, the author's name, the laboratory where the work was done, and the address of the laboratory. At the bottom of this page should appear any footnotes to the title (indicated by superscript *, †, ‡).

Abstract. The second page of the manuscript for each regular paper should contain an abstract of 50–200 words, summarizing the nature and results of the research described. The abstract must be completely self-contained, having no references to items appearing in the body of the manuscript.

Equations, Symbols, and Abbreviations. Mathematical equations and symbols must be typewritten wherever possible. Equation numbers are given in *square* brackets to the right of the equation, and references in the text to equations should be in the form "Eq. [3]." Greek letters may be identified in pencil in the margin. Other non-standard mathematical symbols should be clearly identified, in a separate list if necessary. Symbols for vectors and tensors should be clearly marked. The American

Chemical Society's *Handbook for Authors*, 1978 edition, or the *Style Manual of the American Institute of Physics* should be followed for standard abbreviations, names, and symbols for units.

References. Literature references are cited in numerical order in the text by *in-line, parenthesized, italic numerals*. References to "unpublished" or "to be published" work from the author's laboratory should not be given. However, papers actually accepted may be referred to as "in press" if the name of the journal is included.

The references themselves are to be typed double-spaced on a separate sheet in numerical order. Each reference contains the author's initials, last name, journal name, volume, initial page number, and year in parentheses, *in that order*. The name of the journal is abbreviated in the style of *Chemical Abstracts Service Source Index*, 1980. For book references, the form is author's name, name of the book in quotation marks, editor's name (if any), edition if other than the first, chapter or page number, publisher's name, place of publication, and year of publication.

Footnotes. Authors are urged to give careful thought to the logical construction of the manuscript, so that explanatory or parenthetical footnotes need not be employed. Any footnotes which are indispensable are not intermixed with references, but are indicated in the text by consecutive, superscript numerals, and each footnote will then appear in the print at the bottom of the page on which it is cited. In the manuscript, any footnotes to be included are gathered together in numerical order on a separate page.

Tables. Tables are numbered consecutively with Arabic numerals and are mentioned in order in the text. Each table should be laid out carefully, so that minimum space is used and entries are accurately grouped and clearly labeled. Usually, a table should be arranged vertically, with more rows than columns. Vertical lines are not used to separate the columns. Each table is provided with a title and typed on a separate sheet of paper. Footnotes to the tables are placed directly below it and are indicated by superscript, lowercase, italic letters (*^{a,b,c}*).

Figures and Diagrams. Figures are numbered consecutively with Arabic numerals and are mentioned in order in the text. They must be carefully drawn in black, waterproof drawing ink, to draftsman's standards, with lettering by stencil or drawing machine. Freehand, penciled, or typewritten lettering is not acceptable. Lettering should include numerical scales and units for the two axes, and should be large enough to be legible after reduction of 50–60%. Legends are to be typed together on a separate sheet. Small figures must be mounted on sheets of full manuscript page size. Larger originals must be photographically reduced to page size and glossy high-contrast prints of this size must be supplied by the author. The original and two duplicates of each figure are required. Ink drawings should also be supplied for complex molecular formulas or diagrams which the printer cannot readily set in type. Illustrations in color can be accepted only if the authors defray the cost.

Communications and Notes

Communications are preliminary accounts of work of special importance or discussions of controversial but significant topics. A Communication must be especially carefully prepared. Since it may not be refereed and the author will not receive galley proofs for correction, it is the responsibility of the author to ensure that the manuscript as submitted is free of typographical or substantive errors. The length of a Communication should be no more than that corresponding to five printed pages. Notes are complete accounts of work of limited scope. Their brevity often permits expeditious handling. Communications and Notes require no abstract and are not divided into sections.

JOURNAL OF MAGNETIC RESONANCE

Manuscript Title _____

Authors _____

I hereby confirm the assignment of all copyrights in and to the manuscript named above in all forms and media to Academic Press effective if and when it is accepted for publication by Academic Press. (For U.S. government employee authors, this provision applies only to the extent to which copyright is transferable.) I also confirm that the manuscript contains no material the publication of which would violate any copyright or other personal or proprietary right of any person or entity, and I acknowledge that Academic Press is relying on this letter in publishing this manuscript.

Date

Signed

Name (and title if not author)

To be signed by at least one of the authors (who has obtained the assent of the others, if any). In the case of a "work made for hire" (a work prepared by an employee within the scope of his or her employment or commissioned as a work for hire under a written agreement), an authorized representative of the employer should sign.

Please note: Manuscripts cannot be processed for publication until the Publisher has received this signed form.

If the manuscript is not published by Academic Press, this letter will not take effect.
